DATE: November 20, 2025

TO: Joliet Plan Commission

FROM: Ray Heitner - Planner

SUBJECT: FP-4-25: Final Plat of Laraway ANR Pipeline TC Energy Subdivision.

GENERAL INFORMATION:

APPLICANT: Andrew D. Black, representative for ANR

Pipeline TC Energy

STATUS OF APPLICANT: Developer

OWNER: ANR Pipeline TC Energy

REQUESTED ACTION: Approval of a final plat of subdivision.

PURPOSE: To create a two-lot subdivision for a future gas

compressor facility.

EXISTING ZONING: R-1B (Single-Family Residential)

LOCATION: 4101 S. Cherry Hill Road

SIZE: Approximately 79 acres

EXISTING LAND USE: Undeveloped

SURROUNDING LAND USE & ZONING:

NORTH: Agricultural; R1-B (Single-Family Residential) SOUTH: Agricultural; R-1B (Single-Family Residential)

EAST: Agricultural; County A-1 (Agricultural) WEST: Agricultural; County A-1 (Agricultural)

<u>SITE HISTORY</u>: The subject property is located at 4101 S. Cherry Hill Road. The property was originally annexed into the city in 2006 at the request of the property owners who intended to develop the property as a future single-family residential subdivision. The property has remained undeveloped agricultural land since its annexation. The requested final plat would create two lots on the existing 79-acre parcel, with future development of a gas compressor facility on the smaller, 20-acre lot (Lot 2). A preliminary plat of subdivision was approved by the City Council on October 15, 2024. Approval of the

Recording Plat of subdivision by the City Council will be required before building permits for the site can be issued.

<u>SPECIAL INFORMATION</u>: The proposed gas compressor facility would be utilized to assist in the transportation of natural gas through an existing pipeline system that crosses the northern portion of the subject property. The facility is a necessary piece of equipment to ensure the continued operation of pipelines and the supply of natural gas to the public. The underlying zoning designation for the subject property is R-1B (Single-Family Residential). However, the proposed gas compressor facility use is classified as an essential service and is allowed in any district insofar as it is permitted, authorized, or regulated by law or other ordinance.

The facility would consist of a main building where the gas compression would take place, in addition to a few small accessory buildings for storage and potentially another building for staff operations. All compression would take place within the main compression building, however, certain above-ground piping, and equipment adjacent to the main building would be necessary. Buildings within the site would be serviced with well water and septic infrastructure since both water and sanitary sewer mains for the city are over two miles from the site. County approval of well and septic infrastructure on the site will be required prior to construction of the main building. The petitioner has stated that the site would be staffed by no more than 10 employees at any time, and that vehicular traffic to and from the site would be minimal.

Fire and gas protection systems would be put in place at the facility to alert on-site personnel of a fire or natural gas leak. These systems are designed to address hazardous conditions by automatically stopping the compressor units before dangerous incidents occur. The facility would be required to meet standards for its equipment from the Environmental Protection Agency (EPA) to reduce emissions of greenhouse gases and smog-forming volatile organic compounds (VOC's). Noise levels from the facility would not be allowed to exceed a day-night average level of 55 decibels pursuant to interstate system regulation standards. Noise at this level is comparable to normal conversation or moderate rainfall.

The subject property is surrounded by farmland on all sides. The facility as proposed would be located approximately .6 miles west of an existing residential neighborhood in the Village of Manhattan. Another neighborhood in unincorporated Jackson Township is approximately .5 miles southwest of the proposed site. I-1 (Light Industrial) zoning districts can be found further north and to the southwest of the site. The closest residential subdivision within the City of Joliet is located over 2.5 miles to the west of the subject location.

Lot 2 on the attached final plat would host the proposed gas compressor facility. Lot 2 would be a 20-acre portion of the existing 79-acre parent parcel. The plat shows one point of access to and from Lot 2. City staff review of the overall site plan, landscaping plan, and building design will be required prior to issuance of building permits. The developer will be required to pay an escrow for ½ road public improvements for South Cherry Hill Road, located east of the site, and Breen Road, a future extension of which would be located south of the subject property. Water main extension costs within these ½ road improvements will be included in the proposed escrow amounts.

ANALYSIS:

Approval of the Final Plat of the Laraway ANR Pipeline TC Energy Subdivision will allow the petitioner to proceed with preparation of the recording plat. Upon approval of the final and recording plats, the petitioner would be allowed to develop Lot 2 for future use of a gas compressor facility. The proposed use is listed as an essential service within the City's Zoning Ordinance. Federal limitations on emissions and noise levels would be enforced to limit potential negative externalities. The site is currently over .5 miles away from the nearest residential area.

RECOMMENDED ACTION:

Staff recommends the Plan Commission recommend approval of the Laraway ANR Pipeline TC Energy Subdivision to the City Council.
