## STAFF REPORT

**DATE:** October 7, 2025

**TO:** Zoning Board of Appeals

**FROM:** Helen Miller, Planner

**RE:** Petition Number: 2025-49

Applicant: Dimension Energy (Joliet CSG 1 LLC and

Joliet CSG 2 LLC)

Status of Applicant: Lessee

Property Owner: Channahon Owner LLC

Location: 3300 Channahon Road (Council District #5)

Request: Special Exception to allow a roof-mounted solar

installation

#### **Purpose**

The applicant is requesting a Special Exception to allow a roof-mounted solar installation for community supply on the existing industrial building at 3300 Channahon Road. Community solar is generally defined as a solar project where the benefits from an off-site solar array are shared by multiple customers, including individuals, businesses, and other groups. Customers typically receive monetary credits on their electric bill based on their subscription to the project. Because a community solar installation supplies power back to the utility grid and not solely to onsite facilities, it is considered a principal use and not an accessory use. The Zoning Ordinance does not include provisions for solar installations as a principal use. Therefore, this request must be considered as a Special Exception.

The City Council makes the final decision on this Special Exception request, with a recommendation from the Zoning Board of Appeals.

## Site Specific Information

The subject site is Lot 1 in Ketone Business Center Unit 1 Subdivision, located southwest of the intersection of Houbolt Road and Channahon Road. The property contains a 1.2-million-square-foot warehouse and surrounding parking area for a Target distribution center. The property is zoned I-2 (general industrial).

## Surrounding Zoning, Land Use and Character

The property is located in the Ketone Business Center industrial subdivision and is surrounded by other properties within the subdivision with I-2 (general industrial) zoning.

Adjacent uses include a warehouse and logistics building and a commercial equipment sales facility.

## **Applicable Regulations**

• Section 47-3.9(BB) Miscellaneous Terms – Zoning Exceptions and Variances

**Section 47-3.9(BB)(1) Exception**: An exception is a use permitted only after review of an application by the Board of Appeals or Commission other than the Administrative Official (Building Inspector), such review being necessary because the provisions of this Ordinance covering conditions, precedent or subsequent, are not precise enough to all applications without interpretation and such review is required by the Ordinance.

The "exception" differs from the "variance" in several respects. An exception does not require "undue hardship" in order to be allowable. The exceptions that are found in this Ordinance appear as "special approval" or review by Plan Commission, Legislative Body, or Board of Appeals. These land uses could not be conveniently allocated to one zone or another or the effects of such uses could not be definitely foreseen as of a given time. The general characteristics of these uses include one or more of the following:

- a. They require large areas;
- b. They are infrequent;
- c. They sometimes create an unusual amount of traffic;
- d. They are sometimes obnoxious or hazardous; and
- e. They are required for public safety and convenience.

## **Discussion**

The petitioner, Dimension Energy, is a national company that develops, owns, and operates community solar and other clean energy projects across 14 states, including Illinois. They are requesting approval of a special exception to allow a roof-mounted solar installation and associated ground equipment for a community solar project at 3300 Channahon Road. The solar array would be located on the roof of an existing warehouse building within an industrial subdivision. The solar installation would be owned and operated by Dimension Energy, who would lease the roof and ground space from the property owner. Dimension Energy would be responsible for the installation, maintenance, and removal of the solar panels. The expected life cycle of the installation is around 25 years.

The proposed solar installation would be for community supply, not a behind-the-meter system that generates electricity for onsite use. The installation would be connected to ComEd equipment and would supply power back to the utility grid for use by properties served by that system. A community solar project is supported by subscribers who receive credits on their energy bill for their share of the program; they do not receive electricity

directly from the solar installation. Subscribers can be individuals, businesses, municipalities, nonprofits, and other groups. For this project, subscribers would need to be located in ComEd's Illinois utility territory.

The physical arrangement and appearance of the installation would be very similar to an accessory solar installation that serves the building. The rooftop panels would not be visible from the ground, as they would be set back from the edge of the building and only rise about one foot above the roof surface. The ground equipment is similar to the equipment used for a building's electrical service. Dimension Energy proposes two installations on this building, one on each half of the roof, to be owned by two separate LLCs. Each installation would have an enclosed equipment area on the side of the building. There will also be an equipment area for ComEd's ground equipment at the north corner of the parking area near the access driveway. The ComEd equipment would not be enclosed but would be painted dark green for minimum visibility. Examples of recently completed Dimension Energy roof-mounted solar projects and their equipment are shown in Figures 3 through 7.

Staff does not believe that the proposed solar installation will have a negative effect on the area. The physical appearance is similar to a permitted accessory installation and is not out of character with an industrial site. The petitioner will have a lease and an agreement with the property owner that addresses maintenance, installation, and removal of the installation. The petitioner will be required to obtain all necessary building permits for the proposed project.

## **Conditions**

If the Zoning Board desires to approve the Special Exception to allow a roof-mounted solar installation at 3300 Channahon Road, the following conditions would be included:

1. That a building permit shall be obtained.

Figure 1: Target distribution facility at 3300 Channahon Road (2025) COMED **EQUIPMENT** AREA EQUIPMENT ENCLOSURE 3500 SOLAR **ARRAY 1** 3300 EQUIPMENT ENCLOSURE SOLAR .

### RESPONSE TO SPECIAL EXCEPTION CRITERIA

An exception is a use permitted only after review of an application by the Board of Appeals or Commission other than the Administrative Official (Building Inspector), such review being necessary because the provisions of this Ordinance covering conditions, precedent or subsequent, are not precise enough to all applications without interpretation and such review is required by the Ordinance.

The "exception" differs from the "variance" in several respects. An exception does not require "undue hardship" in order to be allowable. The exceptions that are found in this Ordinance appear as "special approval" or review by Plan Commission, Legislative Body, or Board of Appeals. These land uses could not be conveniently allocated to one zone or another or the effects of such uses could not be definitely foreseen as of a given time. The general characteristics of these uses include one or more of the following:

- (a) They require large areas;
- (b) They are infrequent;
- (c) They sometimes create an unusual amount of traffic;
- (d) They are sometimes obnoxious or hazardous; and
- (e) They are required for public safety and convenience.

In addition to permitting the special exceptions otherwise specified in the Zoning Ordinance, the Board shall have authority to permit the following:

(a) The temporary use of a building or premises in any district for a purpose of use that does not conform to the regulations prescribed by this chapter, provided that such use be of a true temporary nature and does not involve the erection of substantial buildings. Such permit shall be granted in the form of a temporary and revocable permit for not more than a 12-month period, subject to such conditions as will safeguard the public health, safety, convenience, and general welfare.

(b) The temporary use of a building or premises in undeveloped sections for a purpose that does not conform to the regulations prescribed by this chapter, provided that such structure or use is of a true temporary nature, is promotive of or incidental to the development of such undeveloped sections, and does not involve the erection of substantial buildings. Such permit shall be granted in the form specified under sub-section (a) above.

if

Please describe how this request meets the criteria by responding to the following questions in your own words.

1. Briefly describe/explain the purpose of the request for an exception, including a timeframe for the use applicable.
In discussing the proposed roof-mounted solar project with Planning staff, the existing
ordinance was deemed to not have provisions for a roof-mounted community solar
project such as this one. The installation is substantially located on the roof of the existing
building, and will require a relatively small amount of ground-mounted electrical equipment
which is able to be screened from view should the City determine its location requires
screening. All efforts are made in the design phase to locate ground-level electrical
equipment in appropriate locations. The design life of the project is approximately 25 years.
The roof-mounted equipment will not be visible from ground level. The project will generate
clean, reliable electricity locally, as well as tax revenue and energy savings for the City.
2. Identify the section of the Zoning Ordinance for which an exception is being requested.
N/A - community solar not specifically mentioned in ordinance

3. What impact would the granting of this special exception have upon the essential character of the general area? Please include both positive and negative impacts.

The project will have no negative impact on the essential character of the general area, given its minimal visual impact and location of ground-level equipment set back substantially from the main road. Positive impacts include clean energy generation, tax revenue.
